
	Refined vegetal oleins
	30/06/2022 Version 1.06 Page: 1 of 2

IDENTIFICATION:

Name of the product:	Vegetable acid refining oils
Ingredients:	100% Vegetable acid refining oils
Containing:	Rape, sunflower, corn, peanut, rapeseed genetically modified, IP soya, soya genetically modified.
Production methods:	Acid oils that come from decomposition or sulfuric acid breakdown of the paste obtained during the neutralization stage of vegetable oils by the successive use of phosphoric acid during the chemical refining process.
Origin:	France
Applications:	<p>→Animal feed - name: Refined vegetal oleins. By-product obtained from the deacidification of vegetable oils by washing or distillation (in accordance with Regulation (EC) No 767/2009 of July 13, 2009 and Regulation (EC) 575/2011 of June 16, 2011 and subsequent amendments).</p> <p>* The use of acidic oils for food and human consumption is strictly prohibited.</p>
